This listing of the claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

 (Original) A computer system for determining and transmitting cooking commencement instruction for selected food items at time intervals to supply future needs of the selected food items, comprising:

programmable memory;

a cooking station monitor;

a table of selected food items stored on said programmable memory;

a table of desired quantities of the selected food items at desired time intervals relating to said table of selected food items, said table of desired quantities at desired time intervals being stored on said programmable memory;

a table of cooking time to prepare intervals relating to said table of selected food items, said table of cooking time to prepare intervals being stored on said programmable memory;

a variable quantity of processed selected food items stored on said programmable memory;

clock means for establishing a current time;

control means for initiating a cooking instruction to said cooking station monitor in response to a selected relation between the current time and said table of desired quantities of the selected food items at desired time intervals and said table of cooking time to prepare intervals, and a selected relation between the variable quantity

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

of selected food items and said table of desired quantities of selected food items at desired time intervals.

- 2. (Original) The computer system of claim 1 wherein said control means initiates the cooking instruction to said cooking station monitor upon the current time being equal to or less than the desired time interval with said table of desired quantities of the selected food items at desired time interval minus a preparation time interval associated with each selected food item.
- 3. (Original) The computer system of claim 1 wherein said control means further establishes the cooking instruction upon the quantities of processed selected food items being less than the desired quantities within said table of desired quantities of the selected food items at desired time intervals.
- 4. (Original) The computer system of claim 1 further comprising a variable quantity of food items presently cooking, and said variable quantities of processed food items includes said variable quantity of food items presently cooking.
- 5. (Original) The computer system of claim 1 further comprising a cash register and wherein said control means subtracts a number of said selected food items manually entered upon said cash register from said variable quantity of selected food items stored on said programmable memory.
- 6. (Original) The computer system of claim 1 further comprising a table of number of food items to be cooked at a time stored on said programmable memory and relating to said table of selected food items.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

7. (Original) A computer system for determining and transmitting cooking times for selected food items at time intervals to predict future needs of the selected food items, comprising:

programmable memory;

a table of selected food items stored on said programmable memory;

a table of desired quantities of the selected food items at desired time intervals relating to said table of selected food items, said table of desired quantities at desired time intervals being stored on said programmable memory;

a variable quantity of processed selected food items stored on said programmable memory;

clock means for establishing a current time;

control means for initiating a cooking instruction in response to a selected relationship between the current time and said table of desired quantities of the selected food items at desired time intervals, and a selected relationship between the variable quantity of processed selected food items and said table of desired quantity of processed selected food items at desired time intervals.

8. (Original) The computer system of claim 7 further comprising a table of cooking time to prepare intervals relating to said table of selected food items, said table of cooking time to prepare intervals being stored on said programmable memory, whereby said control means for initiating a cooking instruction to said cooking station monitor does so in response to a selected relation between the current time and said table of desired quantities of the selected food items at desired time intervals and said table of cooking time to prepare intervals.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET NO.: 29178/38215A

9. (Original) The computer system of claim 7 wherein said control means initiates the cooking instruction to said cooking station monitor upon the current time being equal to or less than the desired time interval with said table of desired quantities of the selected food items at desired time interval minus a preparation time interval associated with each selected food item.

- 10. (Original) The computer system of claim 7 wherein said control means further establishes the cooking instruction upon the variable quantity of processed selected food items being less than the desired quantities within said table of desired quantities of the selected food items at desired time intervals.
- 11. (Original) The computer system of claim 7 further comprising a variable quantity of food items presently cooking, and said variable quantity of processed food items includes said variable quantity of food items presently cooking.
- 12. (Original) The computer system of claim 7 further comprising a cash register and wherein said control means subtracts a number of said selected food items manually entered upon said cash register from said variable quantity of processed selected food items stored on said programmable memory.
- 13. (Original) The computer system of claim 7 further comprising a table of number of food items to be cooked at a time stored on said programmable memory and relating to said table of selected food items.
- 14. (Currently Amended) A system for predicting future food needs comprising:

ATTORNEY DOCKET No.: 29178/38215A

a processor <u>programmed to determine cooking instructions for food</u>

items based on a selected relation between time of day, cooking times for the food

items and desired quantities of food items at desired time intervals, and a selected

relation between variable quantities of processed food items and the desired quantities

of food items at desired time intervals;

a memory <u>operatively</u> coupled to the processor-and configured to store for storing information about food items, the information including desired quantities of food items at desired time intervals, cooking times for food items, and variable quantities of processed food items; and

an a user interface operationally coupled to the processor and the memory and configured adapted to communicate the cooking instructions determined by the processor for the food items to a user in response to a selected relation between time of day, the cooking times for the food items and the desired quantities of food items at desired time intervals, and a selected relation between the variable quantities of processed food items and the desired quantities of food items at desired time intervals.

- 15. (Original) The system of claim 14, further comprising an order receiving interface operationally coupled to the processor and the memory and adapted to receive orders for food items and update the information about food items including the variable quantities of processed food items.
- 16. (Original) The system of claim 15, wherein the processor upon receiving an order for a selected number of a selected food item from the order receiving interface subtracts the selected number of the selected food item from the variable quantities of processed food items for the selected food item.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

17. (Original) The system of claim 14, wherein the user interface comprises an input device and an output device.

- 18. (Original) The system of claim 17, wherein the output device is a display.
- 19. (Original) The system of claim 14, wherein the processor initiates a cooking instruction for a selected food item to the user interface upon the current time of day being equal to or less than a time value in the desired quantities of food items at desired time intervals for the selected food item minus the cooking time for the selected food item.
- 20. (Original) The system of claim 14, wherein the processor initiates a cooking instruction for a selected food item to the user interface upon the variable quantities of processed food items for the selected food item being less than a desired quantity of the selected food item in the desired quantities of food items at desired time intervals.
- 21. (Original) The system of claim 14, wherein the variable quantities of processed food items include a sum comprising quantities of processed food items on-hand and quantities of food items presently cooking.
- 22. (Original) The system of claim 14, the information about food items further including a number of food items to be cooked.
- 23. (Previously Withdrawn) A method for predicting future food needs comprising:

SERIAL No.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

providing information about food items including desired quantities of food items at desired time intervals, cooking times for food items, and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor; and

issuing a cooking instruction for the food items in response to a selected relation between time of day, the cooking times for the food items and the desired quantities of food items at desired time intervals, and a selected relation between the variable quantities of processed food items and the desired quantities of food items at desired time intervals, wherein the cooking instruction is communicated by a user interface operationally coupled to the processor and the memory.

24. (Previously Withdrawn) The method of claim 23, further comprising:

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

25. (Previously Withdrawn) The method of claim 24, wherein the updating comprises subtracting the selected number of orders received for the selected food items from the variable quantities of processed food items for the selected food items.

SERIAL No.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

26. (Previously Withdrawn) The method of claim 23, further comprising issuing a cooking instruction for a selected food item to the user interface upon the current time of day being equal to or less than a time value in the desired quantities of food items at desired time intervals for the selected food item minus a cooking time for the selected food item.

- 27. (Previously Withdrawn) The method of claim 23, further comprising issuing a cooking instruction for a selected food item to the user interface upon the variable quantities of processed food items for the selected food item being less than a desired quantities of the selected food item in the desired quantity of food items at desired time intervals.
- 28. (Previously Withdrawn) The method of claim 23, wherein the variable quantities of processed food items include a sum comprising quantities of processed food items on-hand and quantities of food items presently cooking.
- 29. (Previously Withdrawn) The method of claim 23, further comprising providing information about a number of food items to be cooked.
- 30. (Previously Withdrawn) A method for predicting future food needs comprising:

providing information about food items including desired quantities of food items at desired time intervals and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor;

monitoring the variable quantities of processed food items relative to the desired quantities of food items at desired time intervals;

SERIAL NO.: 10/077,364

ATTORNEY DOCKET NO.: 29178/38215A

issuing a cooking instruction for a selected food item when the variable quantities of processed food items for the selected food item at a time of day is less than the desired quantities of food items at desired timer intervals for the selected food item at the time of day, wherein the cooking instruction is communicated by a user interface operationally coupled to the processor and the memory; and

updating the variable quantities of processed food items for the selected food item upon commencement of the cooking of the selected food item, wherein the updating is communicated by the user interface to the memory.

31. (Previously Withdrawn) The method of claim 30, further comprising:

receiving an order for a selected number of the selected food item from an order receiving interface operationally coupled to the processor and the memory; and

updating the information about the selected food item including the variable quantities of processed food items based on the order received for the selected food item.

32. (Previously Withdrawn) The method of claim 31, wherein the updating comprises subtracting the selected number of orders received for the selected food item from the variable quantities of processed food items for the selected food item.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

33. (Previously Withdrawn) The method of claim 30, further comprising updating the desired quantities of food items at desired time intervals based upon a history of issued cooking instructions for food items.

- 34. (Previously Withdrawn) The method of claim 30, further comprising updating the desired quantities of food items at desired time intervals for a specific time interval based on special food needs during the specific time interval.
- 35. (Previously Withdrawn) The method of claim 30, wherein the variable quantities of processed food items include a sum comprising quantities of processed food items on-hand and quantities of food items presently cooking.
- 36. (Previously Withdrawn) The method of claim 30, wherein the updating of the variable quantities of processed food items includes updating the quantities of food items presently cooking upon commencement of the cooking of food items.
- 37. (Previously Withdrawn) A method of predicting future needs of food comprising:

providing information about food items including desired quantities of food items at desired time intervals, cooking time for food items, and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor;

monitoring the time of day relative to desired time values in desired quantities of food items at desired time intervals and the cooking time for food items in the desired quantities of food items at desired time intervals;

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

determined by subtracting the cooking time for the selected food item from the desired time value is proximate to current time, and variable quantities of processed food items for the selected food item is less than the desired quantities of food items at desired time intervals for the selected food item, the cooking instruction being communicated by a user interface operationally coupled to the memory and the processor; and updating the variable quantities of processed food items for the selected food item upon commencement of the cooking of the selected food item, wherein the

38. (Previously Withdrawn) The method of claim 37, further comprising:

updating is communicated by the user interface to the memory.

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

39. (Previously Withdrawn) The method of claim 38, wherein the updating comprises subtracting the selected number of orders received for the selected food items from the variable quantities of processed food items for the selected food items.

SERIAL No.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

40. (Previously Withdrawn) The method of claim 37, further comprising updating the desired quantities of food items at desired time intervals based upon a history of issued cooking instructions for food items.

- 41. (Previously Withdrawn) The method of claim 37, further comprising updating the desired quantities of food items at desired time intervals for a specific time interval based on special food needs during the specific time interval.
- 42. (Previously Withdrawn) The method of claim 37, wherein the variable quantities of processed food items include a sum comprising quantities of processed food items on-hand and quantities of food items presently cooking.
- 43. (Previously Withdrawn) The method of claim 37, wherein the updating of the variable quantities of processed food items includes updating the quantities of food items presently cooking upon commencement of the cooking of food. items.
- 44. (Previously Withdrawn) A method for predicting future food needs comprising:

providing information about food items including desired quantities of food items at desired time intervals, cooking times for food items, and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor;

issuing a cooking instruction for the food items in response to a selected relation between time of day, the cooking times for the food items and the desired quantities of food items at desired time intervals, and a selected relation between the variable quantities of processed food items and the desired quantities of food items at

ATTORNEY DOCKET No.: 29178/38215A

desired time intervals, wherein the cooking instruction is communicated by a user interface operationally coupled to the processor and the memory; and

between a desired stock level of food items, a present stock level of food items, the desired quantities of food items at desired time intervals, and variable quantities of processed food items.

45. (Previously Withdrawn) The method of claim 44, further comprising:

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

46. (Previously Withdrawn) The method of claim 45, wherein the updating comprises subtracting the selected number of orders received for the selected food items from the variable quantities of processed food items for the selected food items.

47. (Previously Withdrawn) A method for predicting future food needs comprising:

providing information about food items including desired quantities of food items at desired time intervals and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor;

monitoring the variable quantities of processed food items relative to the desired quantity of food items at desired time intervals;

issuing a cooking instruction for a selected food item when the variable quantities of processed food items for the selected food item at a time of day is less than the desired quantities of food items at desired timer intervals for the selected food items at the time of day, wherein the cooking instruction is communicated by a user interface operationally coupled to the processor and the memory;

updating the variable quantities of processed food items for the selected food item upon commencement of the cooking of the selected food item, wherein the updating is communicated by the user interface to the memory and

issuing an update inventory instruction in response to a selected relation between a desired stock level of food items, a present stock level of food items, the desired quantities of food items at desired time intervals, and variable quantities of processed food items.

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

48. (Previously Withdrawn) The method of claim 47, further comprising:

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

- 49. (Previously Withdrawn) The method of claim 48, wherein the updating comprises subtracting the selected number of orders received for the selected food items from the variable quantities of processed food items for the selected food items.
- 50. (Previously Withdrawn) A method of predicting future needs of food comprising:

providing information about food items including desired quantities of food items at desired time intervals, cooking time for food items, and variable quantities of processed food items, wherein the information is stored in a memory coupled to a processor;

monitoring the time of day relative to desired time values in desired quantities of food items at desired time intervals and the cooking time for food items in the desired quantities of food items at desired time intervals;

SERIAL NO.: 10/077,364

ATTORNEY DOCKET No.: 29178/38215A

issuing a cooking instruction for a selected food item when the time determined by subtracting the cooking time for the selected food item from the desired time value is proximate to current time, and variable quantities of processed food items for the selected food item is less than the desired quantities of food items at desired time intervals for the selected food item, the cooking instruction being communicated by a user interface operationally coupled to the memory and the processor;

updating the variable quantities of processed food items for the selected food item upon commencement of the cooking of the selected food item, wherein the updating is communicated by the user interface to the memory; and

issuing an update inventory instruction in response to a selected relation between a desired stock level of food items, a present stock level of food items, the desired quantities of food items at desired time intervals, and variable quantities of processed food items.

51. (Previously Withdrawn) The method of claim 50, further comprising:

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

52. (Previously Withdrawn) The method of claim 51, wherein the updating comprises subtracting the selected number of orders received for the selected

food items from the variable quantities of processed food items for the selected food items.

53. (Previously Withdrawn) A method for predicting future food needs comprising:

providing information about food items including desired quantities of food items at desired time intervals, variable quantities of processed food items, desired stock level of food items and present stock level of food items, wherein the information is stored in a memory coupled to a processor;

issuing an update inventory instruction in response to a selected relation between the desired stock level of food items, the present stock level of food items, the variable quantities of processed food items and the desired quantities of food items at desired time intervals.

54. (Previously Withdrawn) The method of claim 53, further comprising:

receiving an order for a selected number of selected food items from an order receiving interface operationally coupled to the processor and the memory; and updating the information about food items including the variable quantities of processed food items based on the order received for the selected food items.

55. (Previously Withdrawn) The method of claim 54, wherein the updating comprises subtracting the selected number of orders received for the selected

SERIAL NO.: 10/077,364 ATTORNEY DOCKET NO.: 29178/38215A

food items from the variable quantities of processed food items for the selected food items.
